**Eurodrill's
RHV 1500**

LONDON TIDEWAY PROJECT

” *Vibrating head technology appears to offer the potential promise of:*

- > increased production rates vs traditional rotary drilling;*
- > lower equipment rental and drill string costs compared with equivalent sonic technologies;*
- > lower drill string wear compared with traditional rotary methods in hard ground*
- > potentially significantly lower equipment capex, maintenance and operating costs compared with traditional sonic drilling;*
- > comparable performance with sonic drilling methods*

“ *Technical Manager Major Projects Bachy Soletanche*
